

Problem Statement

Many people exercise at home without proper guidance, which often leads to incorrect posture and increases the risk of injury. Beginners also struggle to choose suitable workouts based on their fitness level and goals. Existing fitness applications mainly provide recorded videos but lack personalized, real-time feedback. AI Fitness Avatar aims to solve these problems by providing an intelligent virtual coach that analyzes body posture, offers live corrections, tracks progress, and creates personalized workout sessions for every user.

Objectives :

- Provide personalized workout recommendations.
- Detect incorrect posture in real time.
- Reduce the risk of exercise-related injuries.
- Track user progress and fitness goals.
